WORK EXPERIENCE

Project : Barcode Scanner Application for Automation Process

Client : Sintex-Welspun

Role : SAP Fiori/UI5 Developer

- The Barcode Scan Application for Process Automation aims to streamline and automate the process of managing production and stock transfers within the client's manufacturing and logistics operations.
- The functionality to track and process materials as they move through various stages, including FG (Finished Goods) to SFG (Semi-Finished Goods), and further to delivery and PGI (Post Goods Issue) to stock transfer.
- The application is built using SAP Fiori/UI5, incorporating various controls such as Input, Button, FilterObject, Table (SAP.m.Table), Dialog, Fragment, Formatter, and Form to enhance user interaction and ensure a smooth, responsive, and efficient experience.
- The application also leverages OData services for seamless integration with backend systems, ensuring real-time data exchange for accurate tracking and updating of inventory and production data.

Project : Ticketalk

Client : Internal-Daffodils Info Solutions Pvt.Ltd

Role : SAP Fiori/UI5 Developer

- The Ticketalk Application is designed to streamline and manage the ticketing process within the organization.

- The application provides functionality for raising, managing, and tracking tickets, enabling efficient communication and resolution of issues.
- This application is built using SAP Fiori/UI5 and includes controls such as Input, MaskInput, SAP.m.Table, FilterObject, Flexible Column Layout, Dialog, ShellBar, and Fragment, enhancing its functionality and user experience.

Project : Health Monitoring

Client : Internal-Daffodils Info Solutions Pvt.Ltd

Role : SAP Fiori/UI5 Developer

- The Health Monitoring Application is designed to track and monitor various health-related KPIs (Key Performance Indicators) for individuals.
- It integrates real-time data from SAP APIs and provides a user-friendly interface based on SAP Fiori design principles.
- The application includes features like input fields for capturing user data such as date ranges or specific KPI searches.
- Navigation between views is handled using a router with parameters, allowing seamless transitions with context-specific data such as user IDs or selected KPIs.
- The application leverages VizFrame charts, including pie charts for representing percentage-based distributions.
